Projected enrollment strategy

Projected enrollment duration: 9 months
Projected enrollment rate: 1.2 - 1.6 patients / month / site

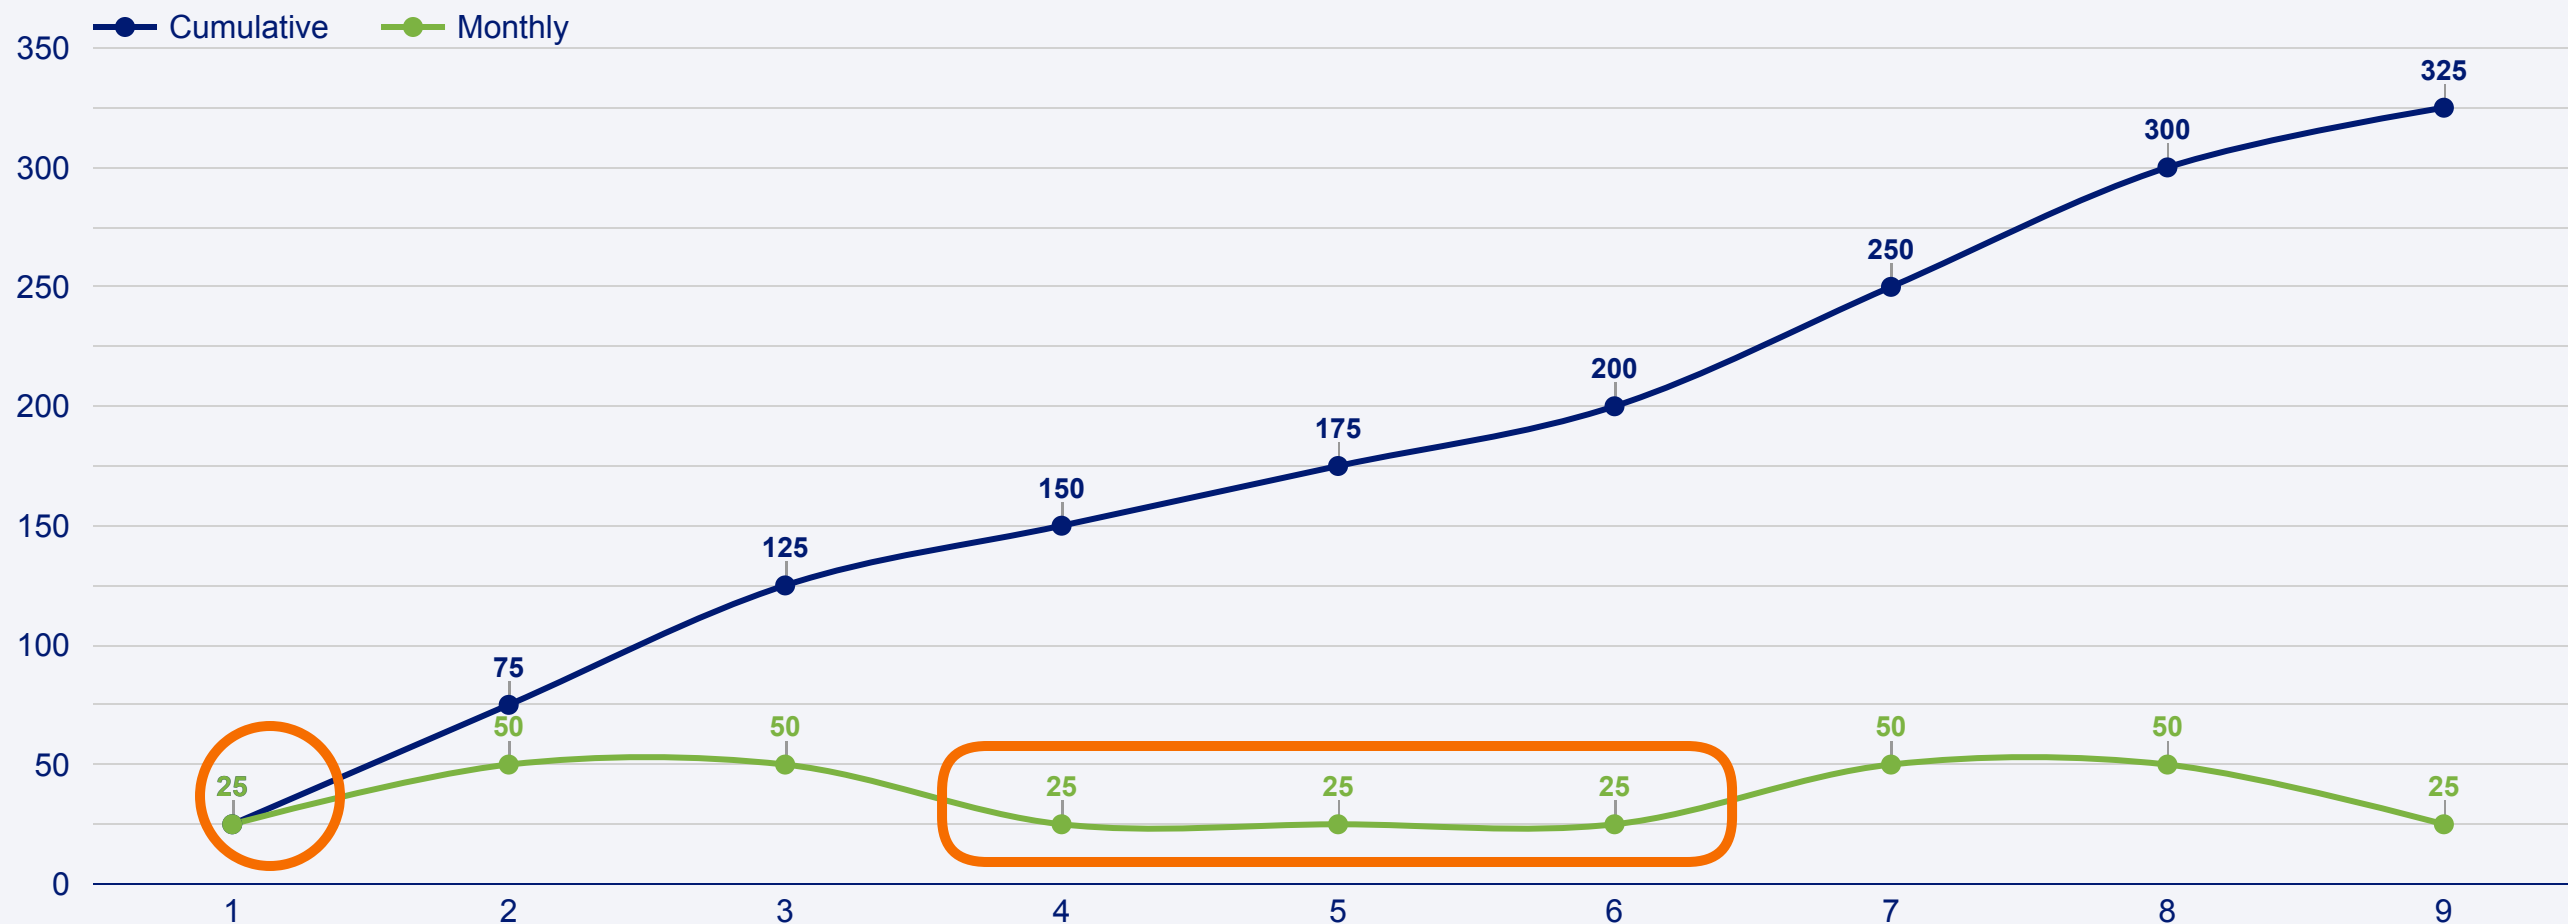

Feasibility data

Projected enrollment in 9 months

* Estimated enrollment duration: 9 months

* Estimated number of sites: 35

* Estimated site enrollment rate: 1.0 - 1.2 pt / month

What to take into consideration:

- * Screen failure rate ~ 60 % (1 randomization : 2 SF)
- * Family members affecting, especially during summer season
- * Christmas period

Notes:

1. Months 1-2: As the screening progresses, sites typically gain a clearer understanding of the inclusion and exclusion criteria. Consequently, it is common for the feasibility data to be adjusted downward
2. There will be about 3 months of lower enrollment due to summer season or Christmas period
